Good = pollen is compatible and blooms in sync., best pollination

Ok = pollen compatible but bloom is somewhat out of sync., cross pollination is likely to be good most years, with perhaps 25% less yield.

Poor = pollen compatible but bloom is very out of sync. could have 50% less or worse reduced yield from poor cross pollination, but some years could be fine.

Bad = pollen is not compatible, or very out of sync, unlikely to work most years

SP no evidence to support this

* There are dozens of Russian varieties. This chart is based mostly on our experience using them in breeding
